The third issue of **Scale Model Life magazine** is now out!

This issue focuses on figure models. I've been building figure models now and then for many years. They normally involve different materials, from resin, to vinyl, to plastic. But often times, even today, I still here modelers groan when a new figure kit is released, and they say, "Oh, too bad it's vinyl instead of plastic, otherwise I would buy one".

Sometimes the comments, are "...you have to paint it with acrylics...", or you have to use special glue, or "...they're too hard to put together..."

So I resolved in this issue to crack open some old and new figure kits and hopefully show others that, while a little different, resin and vinyl kits can be built almost like any plastic kit. The book includes modifications, making bases for them so they can stand up, plenty of putty and sanding, and many general tips to get you started building your own figure model kits.

I believe after you read this book, you'll have no fear building any resin, vinyl or plastic figure kit. You can do it!
