### How to Build Revell's 1/12 Scale GT500 Book.

In the past, the Rocketfin Hobby model books have been about different vehicles. Most of those books have focused on specific kinds of model cars, and presented a theme to them. But this time, I thought I would write a book on just one kind of model car, the new Revell Shelby GT500 Ford Mustang kit.

For one thing, this is a great kit. I think any moderate builder could build this model and enjoy doing it. It's very well designed, and the parts just fall together. The book features three different takes on the model, and will introduce you to some new ideas about the kit, even if you have built one before.

So **grab your copy today** and start building!
